

steps to install an Operating System on a Virtual machine:-

step 1:- To install an operating system on a virtual machine you need to first install an software for creating a virtual machine.

step 2:- Then after creating an virtual machine, on the install software choose the virtual machine that you have create and name the Virtual machine.

step 3:- After creating a virtual machine install an operating system on the virtual machine. Here we have choosen to install Kali Linux as an operating system.

step 4:- After choosing the Kali Linux software, we have to insert the ISO Image for Kali Linux operating system.

step 5:- After inserting the ISO Image for Kali Linux, allocate the memory space needed and the CPU needed.

step 6:- After allocating the memory space, hardware space and CPU, save the virtual machine.

step 7:- Then to use Kali Linux, start the virtual machine.

step 8:- After opening the Kali Linux, you can use Kali Linux as you are using your physical system.
